

ALB200-DB Series 500 W, DBS Antenna Mount TWTA

ALB200-DB Series, 500 W, DBS, Antenna Mount TWTA

The ALB200-DB range of DBS TWT amplifiers from Agilis provide over 420 W of output power in a compact, lightweight, rugged, weatherproof, antenna mount enclosure. The advanced packaging and cooling techniques enable the unit to operate in extreme environmental conditions from direct rain to direct sunlight. The amplifiers can be simply deployed anywhere in the world, are user-friendly, and incorporate a comprehensive remote control facility as standard, including RS485 and Ethernet options.

The HPA incorporates a high efficiency multi-collector TWT powered by an advanced power supply built on over **25** years of experience in the design and manufacture of satellite amplifiers. The company's products have an enviable reputation for performance, robust quality and reliable service.

The **ALB200-DB** is available with a wide range of options and accessories, backed by round-the-clock, worldwide technical support.

OPTIONS

- Integral solid-state amplifier (SSA)
- L-band block upconverter
- · Gain control (requires SSA)
- Lineariser
- Break-out link for upconverter

FEATURES

- Advanced cooling design enables operation at +55 °C and in direct sunlight.
- Weatherproof antenna mount construction allows exposed mounting.
- CE compliant.
- cETLus listed.
- CB certified.
- Redundant control contains control and drive circuits for 1:1 redundancy.
- Stand-alone setting automatically sequences to transmit mode.
- Round-the-clock hotline support.
- Wide range of accessories including: controllers, waveguide networks, cable assemblies.

BLOCK DIAGRAM

OPTIONS

Extensive options are offered with the ALB200-DB and include; integral pre-amplifiers, gain control, linearisers and block upconverters. The options are defined by adding to the base number as shown below:

(Consult Agilis for availability of options).

Frequency Options

The ALB200-DB is offered in two frequency bands:

DB1 - 17.3 - 18.4 GHz

DB2 - 17.3 – 18.1 GHz (upconverter option only)

Pre-Amp Option

The pre-amp option can be selected from any of the following:

- A Integral solid-state amplifier (typical SSG 78 dB).
- D As option 'A' but includes an attenuator to provide 25 dB (min.) of gain control.
- Integral lineariser that improves the linearity of the HPA, providing a C/I of typically –26 dBc at 4 dB OPBO. The lineariser also incorporates the pre-amp and gain control options. (Consult Agilis for availability).

Input Option

The **ALB200-DB** can be offered with an L-Band Block Upconverter. Specify:

N - Standard RF

U - L - DBS Block Upconverter (see page 4)

Note: the upconverter requires the inclusion of either the 'D' or 'Z' options. (Consult **Agilis** for availability).

Break-Out Links

Available only with the upconverter option, this enables bypassing of the upconverter and can be used for monitoring, set-up, redundant switching etc. Specify 'S' for Break-Out Links (leave blank if not required).

ACCESSORIES

The ALB200-DB is supplied with an operation manual, prime power connector mating part, interface connector mating part and air cowls. Additional accessories include:

Override Controller

Provides automatic power-up for 'emergency' situations.

• 1:1 Control Unit

Provides control of 2 HPA's in 1:1 switch configuration. (The waveguide switch network can also be supplied).

Cable Assemblies

For connecting **ALB200-DB** to controllers and waveguide switches.

- Additional mains connector parts.
- Additional interface connector parts.

For more information on accessories, contact Agilis.

Note: the BUC can be operated without the external reference, typical frequency stability ± 0.25 ppm.

HEALTH AND SAFETY HAZARDS

Agilis satellite amplifiers are safe to handle and operate provided that the relevant precautions are observed. **Agilis** does not accept responsibility for damage or injury resulting from the use of electronic devices it produces.

High Voltage

Dangerous voltages are present within the TWT amplifier when operating normally. However, the equipment is designed so that personnel cannot come into contact with high voltage circuits unless covers are removed.

RF Radiation

All RF connectors must be correctly fitted before operation.

Bervllia

The TWT in the amplifier contains beryllium oxide ceramic parts. These are not accessible unless the TWT casing is damaged. Consult **Agilis** regarding the disposal of damaged or life-expired tubes.
