## 2015-95 Upconverter, 250-950 MHz

The 2015-95 Upconverter converts $70 \pm 18 \mathrm{MHz}$ to 250 to 950 MHz in 1 MHz steps with low group delay and flat frequency response. Synthesized local oscillators (LO) provide frequency selection. Multi-function push button switches select the RF frequency, gain, and other parameters. Front panel LEDs provide indication of DC power (green), PLL alarm (red), remote operation (yellow) or the TX carrier is muted (yellow). Variable attenuators for the IF input and output provide a gain range of -10 to +30 dB as adjusted by the front panel multi-function pushbutton switches. Remote operation allows selection of frequency and gain. Parameter selection and frequency and gain settings appear on the LCD display. Connectors are BNC (female) for IF and optional external 10MHz reference input and output, and Type $F$ (female) for the RF output. The unit is powered by a $\mathbf{1 0 0 - 2 4 0} \mathbf{\pm 1 0 \%}$ VAC power supply, and housed in a $13 / 4$ " $\times 19$ " $\times 16$ " rack mount chassis.
