2015-1267 Fixed Frequency Upconverter, 2.6675 GHz

The 2015-1267 S-band Upconverter converts 140 (\pm 36) MHz to 2.6675 GHz (\pm 36 MHz) fixed with low group delay and flat frequency response. Synthesized local oscillators (LO) provide very low phase noise and \pm 0.01 ppm stability frequency selection. Multi-function push button switches select the gain, and other variable parameters. Front panel LEDs provide indication of DC power (green), PLL alarm (red), remote operation (yellow) or the TX carrier is muted (yellow). Variable attenuators for the IF input and output provide a gain range of -10 to +30 dB as adjusted by the front panel multi-function push-button switches. Remote operation allows selection of gain and other variable parameters. Parameter selection and frequency and gain settings appear on the LCD display. Connectors are BNC (female) for IF input and optional external reference input / output, and Type N (female) for the RF output. The External 10 MHz reference Option includes a 10 MHz output connector, which provides the selected (internal or external) 10 MHz reference signal output. The unit is powered by a 90-260 VAC power supply, and housed in a 1 3/4" X 19 " X 16" rack mount chassis.
