2017-65 Up/Downconverter, C-Band

The 2017-65 C-band Up/Downconverter converts 70 MHz to 5.85-6.425 **GHz** (Up) and 3.625-4.2 **GHz** to 70 MHz (Down) in 0.125 MHz steps with low group delay and flat frequency response. Synthesized local oscillators (LO's) provide simultaneous, concurrent frequency selection for the Up and Down converter. Multi-function push button switches select the RF frequency, gain, and other parameters. Front panel LEDs provide indication of DC power (green), PLL alarm for up and downconverters (red), remote operation (yellow), and Upconverter mute (yellow). Gain can be manually controlled over a 0 to +30 dB range for the upconverter and over a +30 to +50 dB range for the downconverter as adjusted by the front panel multi-function push-button switches. Remote operation allows selection of frequency and gain. Parameter selection and frequency and gain settings appear on the LCD display. Connectors are BNC female for IF and the optional external reference input and output, and N female for RF. A high stability (±0.01ppm) option is also available. It is powered by a 100-240 ± 10% VAC power supply and housed in a 1.75" X 19" X 16" 1RU chassis.
