VSAT Antenna in Ku or Ka band

The VM-120 is a high performance VSAT antenna from Holkirk designed to excel in today's demanding data environment.

With a well proven track record the VM series of antennas will provide many years of service in the harshest applications.

**Skids can be stacked for efficient use of space**

**Weight 300 Kg**

**Dimensions  
2.4m x 1.4m x 0.65m**

**Manual over rides on all axis**

**Single button deploy**

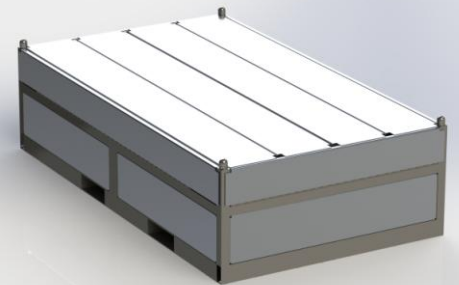

**Isolation mounts to protect the antenna during transit**

**Plenty of storage space within the skid**

**Forklift pockets built-in**

A powerful and smooth positioning system accurately points the antenna at the touch of a button and stows it after use making the system a robust stand alone sub-assembly.

The system is very simple to set-up and use with a fast acquisition time of typically less than 3 minutes from stowed.
